EXPERIENCE

Front End Development

CADDinfotech

03/2025 - Present Chennai

Frontend Development Intern – CADD INFOTECH Center
Worked on multiple beginner-level projects aimed at helping students understand and visualize core concepts. Gained hands-on experience in designing intuitive user interfaces and enhancing user experience, contributing to educational tools and learning resources.
Collaborated closely with mentors to turn conceptual ideas into functional web interfaces using HTML, CSS, and JavaScript.
This internship strengthened my foundation in frontend development and taught me how to build user-centric web applications from scratch.

- Worked on 10+ beginner-level projects focused on simplifying core concepts for students, improving learning outcomes. Designed and developed intuitive user interfaces that enhanced user engagement by 30%, contributing to educational tools used by 100+ learners during the internship period.

EDUCATION

10th Grade

Sri Chaitanya School Hosur, Krishnagiri

2020 - 2021

12th Grade

Sri Chaitanya School Pallavaram, Chennai

2022 - 2023

Bachelor of Engineering Computer Science and Engineering

Sathyabama Institute of Science and Technology

2023 - 2027

LANGUAGES

English
Proficient

Tamil
Native

SKILLS

- Leadership Quality
- Organization skills
- Data Structures and Algorithms
- Problem Solving Abilities
- Programing in C and JAVA
- Front-end development
- UI/UX development
- Canva

SUMMARY

A passionate and goal-driven second-year undergraduate student in Computer Science and Information Technology. Demonstrates strong leadership and organizational skills through academic and extracurricular involvement. Eager to learn and adapt to emerging technologies. Committed to continuous growth and making a meaningful impact in the tech field.

KEY ACHIEVEMENTS

Codeathon 3.0 March 2025

Participant in Codeathon 3.0, Prathyusha Engineering College Developed a Smart Parking Management System using Java, solving real-world parking challenges through efficient frontend design and problem-solving. Applied OS concepts like Producer-Consumer for effective slot management, showcasing innovation and technical skills.

NPTEL - Programming in Java

Completed the NPTEL-certified course on Programming in Java, which covered core concepts such as object-oriented programming, exception handling, multithreading, GUI development, and data structures. Strengthened my understanding of Java programming through hands-on assignments and weekly assessments, enhancing both theoretical and practical skills.

NASSCOM - Digital 101

Successfully completed the NASSCOM Digital 101 course, gaining foundational knowledge of digital technologies including AI, IoT, Big Data, Cloud Computing, and Cybersecurity. The course emphasized how these technologies are transforming industries and enabled me to build a strong base for future tech-driven learning and innovation.

Diploma in C and Python

Completed a comprehensive diploma program focused on C and Python programming in CADD INFOTECH Company. Gained strong foundational knowledge in procedural and object-oriented programming, data structures, and algorithmic problem solving. The hands-on training provided practical experience in writing efficient, real-world applications, enhancing both logic-building and coding skills.

PROJECTS

Smart Parking Management System

03/2025 Chennai

Designed a frontend-based smart parking system using Java to address real-world parking challenges. The system allows offline slot booking for both two-wheelers and four-wheelers via a security-operated interface. Implemented the Producer-Consumer concept from Operating Systems to manage slot allocation efficiently and avoid conflicts.

- This experience sharpened my technical, analytical, and teamwork skills—qualities that are crucial in software development roles.

Security Alarm System

03/2025 Chennai

Ultrasonic-Based Motion Detection System with Real-Time Alert Developed a simple and efficient security alarm system using Arduino programming and an ultrasonic sensor (HC-SR04). The system detects motion within a predefined range by calculating the distance of reflected ultrasonic waves. When movement is detected, it activates real-time alerts using a buzzer and LED. The project applies core concepts of embedded systems and distance measurement, offering a practical solution for basic home or entry-level security.

- The project resulted in a fully functional security alarm system capable of detecting motion in real-time using ultrasonic sensors. It successfully triggered alerts based on distance calculations, demonstrating reliable performance and practical application for basic security needs.

KEY ACHIEVEMENTS

HackerRank

Competitive Programming & Skill Building Actively engaged on HackerRank to improve problem-solving and coding efficiency across multiple domains such as C, Java, Data Structures, and Algorithms. Solved over 100+ coding challenges. Gained hands-on experience in writing optimized code, debugging, and tackling real-world scenarios under timed constraints. Continuously ranked and progressed through leaderboard challenges, enhancing logical thinking and code fluency.
